

Publications F.M.Dekking

1. On repetitions of blocks in binary sequences. J. Combinatorial Theory Ser. A 20 (1976), 292-299.
2. Transcendance du nombre de Thue Morse. C.R. Acad. Sci. Paris Sér. A-B 285 (1977), 157-160.
3. The spectrum of dynamical systems arising from substitutions of constant length. Z. Wahrscheinlichkeitstheorie und verw. Gebiete 41 (1978), 221-239.
4. Mixing properties of substitutions. (with M. Keane). Z. Wahrscheinlichkeitstheorie und verw. Gebiete 42 (1978), 23-33.
5. Strongly non-repetitive sequences and progression-free sets. J. Combinatorial Theory Ser. A 27 (1979), 181-185.
6. Some examples of sequence entropy as an isomorphism invariant. Trans. Amer. Math. Soc. 259 (1980), 167-183.
7. Regularity and irregularity of sequences generated by automata. Sémin. Th. Nombres Bordeaux '79-'80, 901-910.
8. Variations on Peano. Nieuw Arch. Wisk. (3) 28 (1980), 275-281.
9. On the structure of selfgenerating sequences. Sémin. Th. Nombres Bordeaux '80-'81, 3101-3106.
10. Uniform distribution modulo one: a geometrical viewpoint. (with M. Mendès France). J. Reine Angew. Math. 329 (1981), 143-153.
11. Replicating superfigures and endomorphisms of free groups. J. Combin. Theory Ser. A 32 (1982), 315-320.
12. Recurrent sets. Advances in Math. 44 (1982), 78-104.
13. On transience and recurrence of generalized random walks. Z. Wahrsch. verw. Geb. 61 (1982), 459-465.
14. Folds! (with M. Mendès France and A. v.d. Poorten). Math. Intelligencer 4 (1982), 130-138, 173-181, 190-195.
15. Iterated morphisms, fractals and generalized random walks. In: Fête des Mots. Acte des Journées, Rouen 7-8 Juin 1982. GRECO de Programmation du C.N.R.S. 1983, pag. 4-16.
16. Pentagon Tilings. Nieuw Arch. Wisk. (4), 1 (1983), 63-69.
17. Recurrent sets: a fractal formalism. Report 82-32. Dept. of Math. and Inform. Delft, 1982.
18. On the distribution of digits in arithmetic sequences. Sémin. Theorie Nombres Bordeaux '82-'83, 3201-3212.
19. Fourier coding and reconstruction of complicated contours. (with P.J. van Otterloo). IEEE Trans. Syst., Man, Cybern. vol. SMC 16, (1986), p. 395-404.
20. Structures récurrentes. In: Concrétisations de la Mathématiques. Projets pour la Villette. (Ed: J.M. Kantor). Paris, 1986, p. 79-85.
21. Constructions de fractals et problèmes de dimension. In: Fractals. Dimensions non-entières et applications. (Ed: G. Cherbit) Masson, Paris, 1987, p. 132-150.
22. Subcritical branching processes in a two-state random environment, and a percolation problem on trees. J. Appl. Prob. 24 (1987), 798-808.

23. On the survival probability of a branching process in a finite state i.i.d. environment. *Stoch.Proc. Appl.* 27 (1988), 151-157.
24. Superbranching processes and projections of random Cantor sets (with G.J. Grimmett). *Prob. Th. Rel. Fields* 78 (1988), 335-355.
25. On the probability of occurrence of labelled subtrees of a randomly labelled tree. *Theoretical Computer Science* 65 (1989), 149-152.
26. Critical phenomena for random Cantor sets. *Sém Théorie Nomb. Bordeaux '87-'88*, 2301-2308.
27. Branching processes that grow faster than binary splitting. *Amer. Math. Monthly* 98 (1991), 728-731.
28. A nonlinear evolution with travelling waves. *Number Theory and Physics*. (Eds: J.M. Luck, P. Moussa, M. Waldschmidt). *Springer Lect. Notes in Physics* 47 (1990), 204-208.
29. On the structure of Mandelbrot's percolation process and other random Cantor sets (with R.W.J. Meester). *J. Statist. Phys.* 58 (1990), 1109-1125.
30. On family trees and subtrees of simple branching processes (with A.G. Pakes). *J. Theoret. Probab.* 4 (1991), 353-369.
31. Substitutions, branching processes and fractal sets. *Proceedings of the NATO ASI on Fractal Geometry and Analysis, Montréal, July 1989*, (Eds.: J. Bélair, S. Dubuc) *Kluwer Acad. Publ. Dordrecht, Boston, London*, 1991, 99-119.
32. Limit distributions for minimal displacement of branching random walks (with B. Host). *J. Prob. Th. Rel. Fields* 90 (1991), 403-426.
33. Iteration of maps by an automaton. *Discrete Math.* 126 (1994), 81-86.
34. Marches automatiques. *J. Théor. Nombres Bordeaux* 5 (1993), 93-100.
35. On the Thue-Morse measure. *Acta Univ. Carolin.-Math. Phys.* 33 (1992), 35-40.
36. Fractal image coding techniques and contraction operators (with T. Bedford and M.S. Keane). *Nieuw Arch. Wisk.* (4) 10 (1992), 185-217.
37. Fractal coding of monochrome images (with T. Bedford, M. Breeuwer, M.S. Keane and D. v. Schooneveld). *Signal Processing: Image Communication* 6 (1994), 405-419.
38. Deterministic growth-dispersal models and branching random walk. *J. Math. Anal. Appl.* 192 (1995), 529-538.
39. Fibonacci-chain as a periodic chain with discommensurations (with Zh. Y. Wen and T. Janssen). *J. Phys. A: Math. Gen.* 27 (1994), 1691-1702.
40. Random and automatic walks. In: *Beyond Quasicrystals* (Eds: F. Axel and D. Gratias), *Les Editions de Physique and Springer, Berlin*, 1995, p. 415-432.
41. On the shape of the wavefront of branching random walk (with E.R. Speer). In: *Classical and Modern Branching Processes*, (Eds. K.B.Athreya and P.Jagers), *IMA Volumes in Mathematics and its Applications Vol.84, Springer, New York*, 1997, 73-88.
42. An inequality for pairs of martingales and its application to fractal image coding. *J.Appl.Prob.* 33 (1996), 968-973.
43. Quadrtrees, Mandelbrot percolation and the modelling of random sets. *Fractals* 3 (1995), 777-784.
44. Boundedness of oriented walks generated by substitutions (with Z.-Y. Wen), *J. Théor. Nombres Bordeaux* 8 (1996), 377-386.

45. Simulation of rough elastic contacts (with J.J. Kalker and E.A.H. Vollebregt). *J. Appl. Mechanics* 64 (1997), 361-368.
46. Fractal image coding: some mathematical remarks on its limits and its prospects In: *Fractal image coding and analysis* (Trondheim, Norway, 1995), 117-132, NATO Adv.Sci.Inst.Ser.F, 159,(Ed.: Y.Fisher), Springer Verlag, Berlin, 1998.
47. A self similar tiling of Euclidean space by two shapes in two sizes. *J.Phys.A: Math.Gen.* 29 (1996), 2123-2126.
48. What is the long range order in the Kolakoski sequence? The mathematics of long-range aperiodic order (Waterloo, ON, 1995), 115-125, NATO Adv. Sci. Inst. Ser. C Math. Phys. Sci., 489, (Eds.: R.V.Moody and J.Patera), Kluwer Acad. Publ., Dordrecht, 1997.
49. The fractal geometry of random Cantor sets. In: *Proc. of the Topology and Geometry Research Center*, Vol. 7 (1996) (Eds.: I.B.Jung and S.Lee), Kyungpook National Univ., Taegu, Korea, 39-61.
50. Binary images and tree-indexed Markov chains (with C. Kraaikamp and J.G. Schouten), *Rev. Roumaine Math. Pures Appl.* 44 (1999), 181-188.
51. Fractal percolation with neighbour interaction (with R.M. Burton, T. Coffey and K. Hyman). In: *Fractals in Engineering* (Eds.: J.Lévy-Véhel, E.Lutton and C.Tricot), Springer, Berlin etc., 1997, 106-114.
52. Convergence of Branching Cellular Automata (with P.van der Wal). In: *Fractals and Beyond. Complexities in the Sciences.*, (Ed.: M.M.Novak), World Scientific, Singapore, 1998, 195-200.
53. Synthesis and simulation of digital images by tree-indexed Markov chains(with C Kraaikamp, A.M. Elfeki and J. Bruining). In: T.J. Schulz, P.S. Idell (eds.); *Digital image recovery and synthesis IV* (Proceedings of SPIE 3815). SPIE Conference on Digital Image Recovery and Synthesis(Denver, July 1999), International Society for Optical Engineering, Bellingham, 1999, 227-238.
54. A short introduction to ergodic theory and its applications. In: *From quasicrystals to more complex systems* (Eds: F.Axel, F.Denoyer, J.P.Gazeau), Springer, Berlin & EDP Sciences Les Ulis, 2000, 273-289.
55. Fractal percolation and branching cellular automata (with P. van der Wal), *J. Prob. Th. Rel. Fields* 120 (2001), 255-276.
56. A Markov chain model for subsurface characterization: theory and applications (with A. Elfeki), *Mathematical Geology*, 33 (2001), 569-589.
57. Stochastic modeling of subsurface structures by means of multiscale Gaussian random fields (with W.X. Li), 1999, unpublished.
58. Multiscale and multiresolution stochastic modeling of subsurface heterogeneity by tree-indexed Markov chains (with A.Elfeki, C. Kraaikamp and J. Bruining), *Computational Geosciences* 5 (2001), 47-60.
59. The dimension of subsets of Moran sets determined by the success behaviour of their codings (with W.X. Li), *Monatsh.Math.* 131 (2000), 309-320.
60. On the node structure of binary search trees (with S. de Graaf and L.E.Meester), in: *Mathematics and Computer Science. Algorithms, trees, combinatorics and probabilities*. Edited by Daniele Gardy and Abdelkader Makkadem. Trends in Mathematics. Birkhäuser Verlag, Basel, 2000, p.31-40. ISBN: 3-7643-6430-0.
61. The boundary of an attractor of a recurrent iterated function system (with P.van der Wal), *Fractals* 10 (2002), 77-89.

62. Influence of the fine-scale heterogeneity patterns on large-scale behaviour of miscible transport in porous media (with A.Elfeiki, J. Bruining, and C. Kraaikamp) , 2000, Proceedings of Ecmor VII. An extended version appeared in *Petroleum Geoscience* 8 (2002), 159-165.
63. Non-differentiability of devil's staircases and dimension of subsets of Moran sets (with WenXia Li and DongMei Xiao), *Math. Proc. Camb. Phil. Soc.* 133 (2002), 345-355.
64. How smooth is a devil's staircase? (with WenXia Li), *Fractals* 11 (2003), 101-107.
65. Uniform distribution modulo one and binary search trees (with P. van der Wal), *J.Theorie Nombres Bordeaux* 14 (2002), 415-424.
66. An almost sure result for path lengths in binary search trees (with L.E.Meester), *Adv. Appl.Prob.* 35 (2003), 363-376.
67. Which ABO-matching rule should be the decisive factor in the choice between a highly urgent and an elective patient? (with J. de Meester, M. Bogers, H. de Winter, J. Smits, L. Meester, et al.), *Transplant International* 15 (2002), 431-435.
68. Hausdorff dimension of subsets of Moran fractals with prescribed group frequency of their codings (with WenXia Li), *Nonlinearity* 16 (2003), 187-199.
69. Characterization of Subsurface Heterogeneity: Integration of Soft and Hard Information Using the Multidimensional Coupled Markov Chain Approach, E.Park, A.Elfeiki, M.Dekking. In: Chin-Fu Tsang and Apps, Jon A. (Eds.), *Proceedings of the Second international symposium on Underground Injection Science and Technology*, Lawrence Berkeley National Laboratory, Berkeley, California (2003), 1-8.
70. Modelling subsurface heterogeneity by coupled Markov chains: directional dependency, Walther's law and entropy, (with A.Elfeiki), *Geotechnical and Geological Engineering*, 23 (2005), 721 - 756.
71. Reliability assessment of groundwater monitoring networks at landfill sites (with N.B. Yenigül, A.M.M. Elfeiki, J.C.Gehrels, C.v.d.Akker, A.T.Hensbergen), *Journal of Hydrology* 308 (2005), 1-17.
72. Fractales aléatoires, turbulence, galaxies, Cantors. In: *L'irruption des géométries fractales dans les sciences*. Paris: Académie Européene Interdisciplinaire des Sciences (2006), 135-146.
73. On random walks in random scenery (with P.Liardet). In "Dynamics and Stochastics" (Eds. E.Verbitskiy, D.Denteneer and F. Den Hollander). *IMS Lecture Notes Monograph Series* 48, Baltimore USA: Institute for Mathematical Statistics (2006), 47–52. DOI: 10.1214/074921706000000068
74. On the size of the algebraic difference of two random Cantor sets (with K.Simon). *Random Structures and Algorithms* 32 (2008), 205–222) .
75. Optimizing groundwater monitoring systems for landfills with random leaks under heterogeneous subsurface conditions (with N.B.Yenigül, A.M.M. Elfeiki and C.v.d.Akker), *Hydrogeology Journal* 21 (2013), 1761–1772.
76. Understanding the non-Gaussian nature of linear reactive solute transport in 1D and 2D. From particle dynamics to the partial differential equations. (with Gerard Uffink, Amro Elfeiki, Johannes Bruining and Cor Kraaikamp), *Transport in Porous Media* 91 (2012), 574-571.
77. Reducing Geological Uncertainty by Conditioning on Boreholes: the Coupled Markov Chain Approach (with Amro Elfeiki), *Hydrogeology Journal*, 15:8 (2007), 1439-1455.
78. Detection of contaminant plumes released from landfills (with N.B.Yenigül, A.M.M. Elfeiki and A.T.Hensbergen). *Environ. Earth Sci.* 64 (2011), 2127–2140.
79. Stability in one-dimensional random Boolean automata (with L.van Driel and A.Fey). *Journal of Cellular Automata* 5, (2010), 333-351.

80. A problem with the assessment of an iris identification system (with A.T.Hensbergen). *Siam Review* 51, No. 2 (2009), 417—422.
81. Subsurface characterization using a cellular automaton approach (with H.M. Schuttelaars and C. Berentsen). *Mathematical Geosciences* 41 (2009), 491—508.
82. Differences of Random Cantor Sets and the Lower Spectral Radius (with Bram Kuijvenhoven). *Journal of the European Mathematical Society* 13 (2011), 733—760.
83. The algebraic difference of two random Cantor sets: the Larsson family (with Károly Simon and Balázs Székely). *Annals of Probability* 39 (2011), 549—586.
84. Random Cantor Sets and their projections. In: *Fractal Geometry and Stochastics IV*, Bandt, Christoph; Mörters, Peter; Zähle, Martina (Eds.), Birkhäuser Verlag Basel/Switzerland, Progress in Probability, Vol. 61 (2009) 269—284.
85. Correlated fractal percolation and the Palis conjecture (with Henk Don). *Journal of Statistical Physics*, 139 (2010), 307—325.
86. Paperfolding morphisms, plane-filling curves, and fractal tiles, *Theor. Comput. Sci.* 414 (2012), 20—37.
87. Multimodality of the Markov binomial distribution (with DeRong Kong), *J. of Appl. Prob.* 48 (2011), 938—953.
88. A simple stochastic reactive transport model (with DeRong Kong), *Adv. Appl. Prob.* 44 (2012), 874—885.
89. Intersections of homogeneous Cantor sets and beta-expansions (with DeRong Kong and WenXia Li), *Nonlinearity*, 23 (2010), 2815—2834.
90. Plumes in kinetic transport: how the simple random walk can be too simple (with DeRong Kong and Annegreet van Opbroek), *Stochastic Models* 28 (2012), 635—648.
91. Polymetric brick wall patterns and two-dimensional substitutions, *J.Integer Sequences* 16 (2013), Article 13.2.4., 1—9.
92. On the structure of Thue–Morse subwords, with an application to dynamical systems, *Theor. Comput. Sci.* 550 (2014), 107—112.
93. Helge von Koch’s Snowflake Curve Revisited (with E.W. Dekking), *Amer.Math.Monthly* 123, (2016), 181—184.
94. Morphisms, Symbolic Sequences, and Their Standard Forms, *J. Integer Sequences* 19 (2016), Article 16.1.1, 1—8.
95. Topological conjugacy of constant length substitution dynamical systems (with Ethan M. Coven and Michael S. Keane), *Indag. Math.* 28 (2017) 91—107.
96. On the conjugacy class of the Fibonacci dynamical system (with Michael S.Keane), *Theor. Comput. Sci.* 668 (2017), 59—69.
97. The Frobenius problem for homomorphic embeddings of languages into the integers, *Theoretical Computer Science* 732 (2018), 73–79. DOI: 10.1016/j.tcs.2018.04.023
98. A remarkable sequence related to π and $\sqrt{2}$, (with Wieb Bosma, Wolfgang Steiner), *INTEGERS* 18A (2018), #A4, 1–9.
99. Substitution invariant Sturmian words and binary trees, *INTEGERS* 18A (2018), #A7, 1–15.
100. Generalized Beatty sequences and complementary triples, (with J.-P. Allouche), *Moscow J. Comb. Number Th.* 8 (2019), 325–341. DOI: 10.2140/moscow.2019.8.325
101. Base phi representations and golden mean beta-expansions, *Fib. Quarterly* 58 (2020), 38–48.

102. Queens in exile: non-attacking queens on infinite chess boards, (with Jeffrey Shallit, N. J. A. Sloane), *The Electronic Journal of Combinatorics* 27 (2020) ,# P1.52 (27 pages).
103. Morphic words, Beatty sequences and integer images of the Fibonacci language, *Theoretical Computer Science* 809 (2020), 407–417. DOI: 10.1016/j.tcs.2019.12.036
104. The sum of digits function of the base phi expansion of the natural numbers, *INTEGERS* 20, #A45 (2020), 1–6.
105. Permutations of N generated by left-right filling algorithms, *J. Integer Sequences* 20 (2020), 20.4.7, 1–16.
106. How to add two natural numbers in base phi, *Fib. Quart.* 59 (2021), 19–22.
107. The sum of digits functions of the Zeckendorf and the base phi expansions, *Theoretical Computer Science* 859, 6 March 2021, 70–79.
108. The structure of base phi expansions, *INTEGERS* 24, #A24 (2024), 1–28.
109. The structure of Zeckendorf expansions, *INTEGERS* 21, #A6 (2021), 1–10. (arXiv:2006.06970 [math.CO].)
110. Hidden automatic sequences (with Jean-Paul Allouche, Martine Queffelec). arxiv.org/abs/2010.00920v1. *Combinatorial Theory* 1, #20 (2021), 1–15.
111. Sumsets and fixed points of substitutions. *Proc. Amer. Math. Soc. Series B* 9 (2022), 393–403.
112. The algebraic difference of random Cantor sets: a random IFS family (with Károly Simon, Balázs Székely and Nora Székerez). *Advances in Mathematics* 448 (2024), article 109724, 1–43.
113. On the representation of the natural numbers by powers of the golden mean (with Ad van Loon). *Fibonacci Quart.* 61 (2023), 105–118.
114. Two-block substitutions and morphic words (with Michael Keane). *Adv. Applied Math.* 148 (2023), article 102536, 1–8.
115. Counting base phi representations (with Ad van Loon). *Fibonacci Quart.* 62 (2024), 112–124.
116. The Thue-Morse sequence in base $3/2$. *J. Integer Sequences* 23 (2023), 23.2.3, 1–6.
117. On Hofstadter’s G-sequence. *J. Integer Sequences* 23 (2023), 23.9.2, 1–11.
118. The interior of randomly perturbed self-similar sets on the line (with Simon, K., Székely, B. and Szekeres, N.), *Advances in Mathematics*. 448 (2024), 43 p.
119. The structure of base phi expansions, *INTEGERS* 24 (2024), 28 p.
120. On Hofstadter’s G-Sequence, *J. Integer Sequences*. 26 (2023), 23.9.2, 11 p.
121. Multiple markers and return words (In preparation).
